

**Struggling how to
smoothly integrate
new components
into your custom
test bench?**

Custom test benches often call for specialized hardware – like wheel speed sensors or relay modules – requiring customized equipment.

These components must be seamlessly integrated via CAN, USB, or other interfaces to support automated testing.

Our Approach:

1. Requirements Analysis
2. Concept Development
3. Hardware & Software Design
4. Integration Support

- **Realistic sensor simulation using OEM components**
- **Custom-built hardware & software tailored to your needs**
- **Seamless integration into existing test environments**
- **Scalable and reusable for future test scenarios**
