Would you like to automate your test cases using CAPL and enjoy the benefits of Trace32?
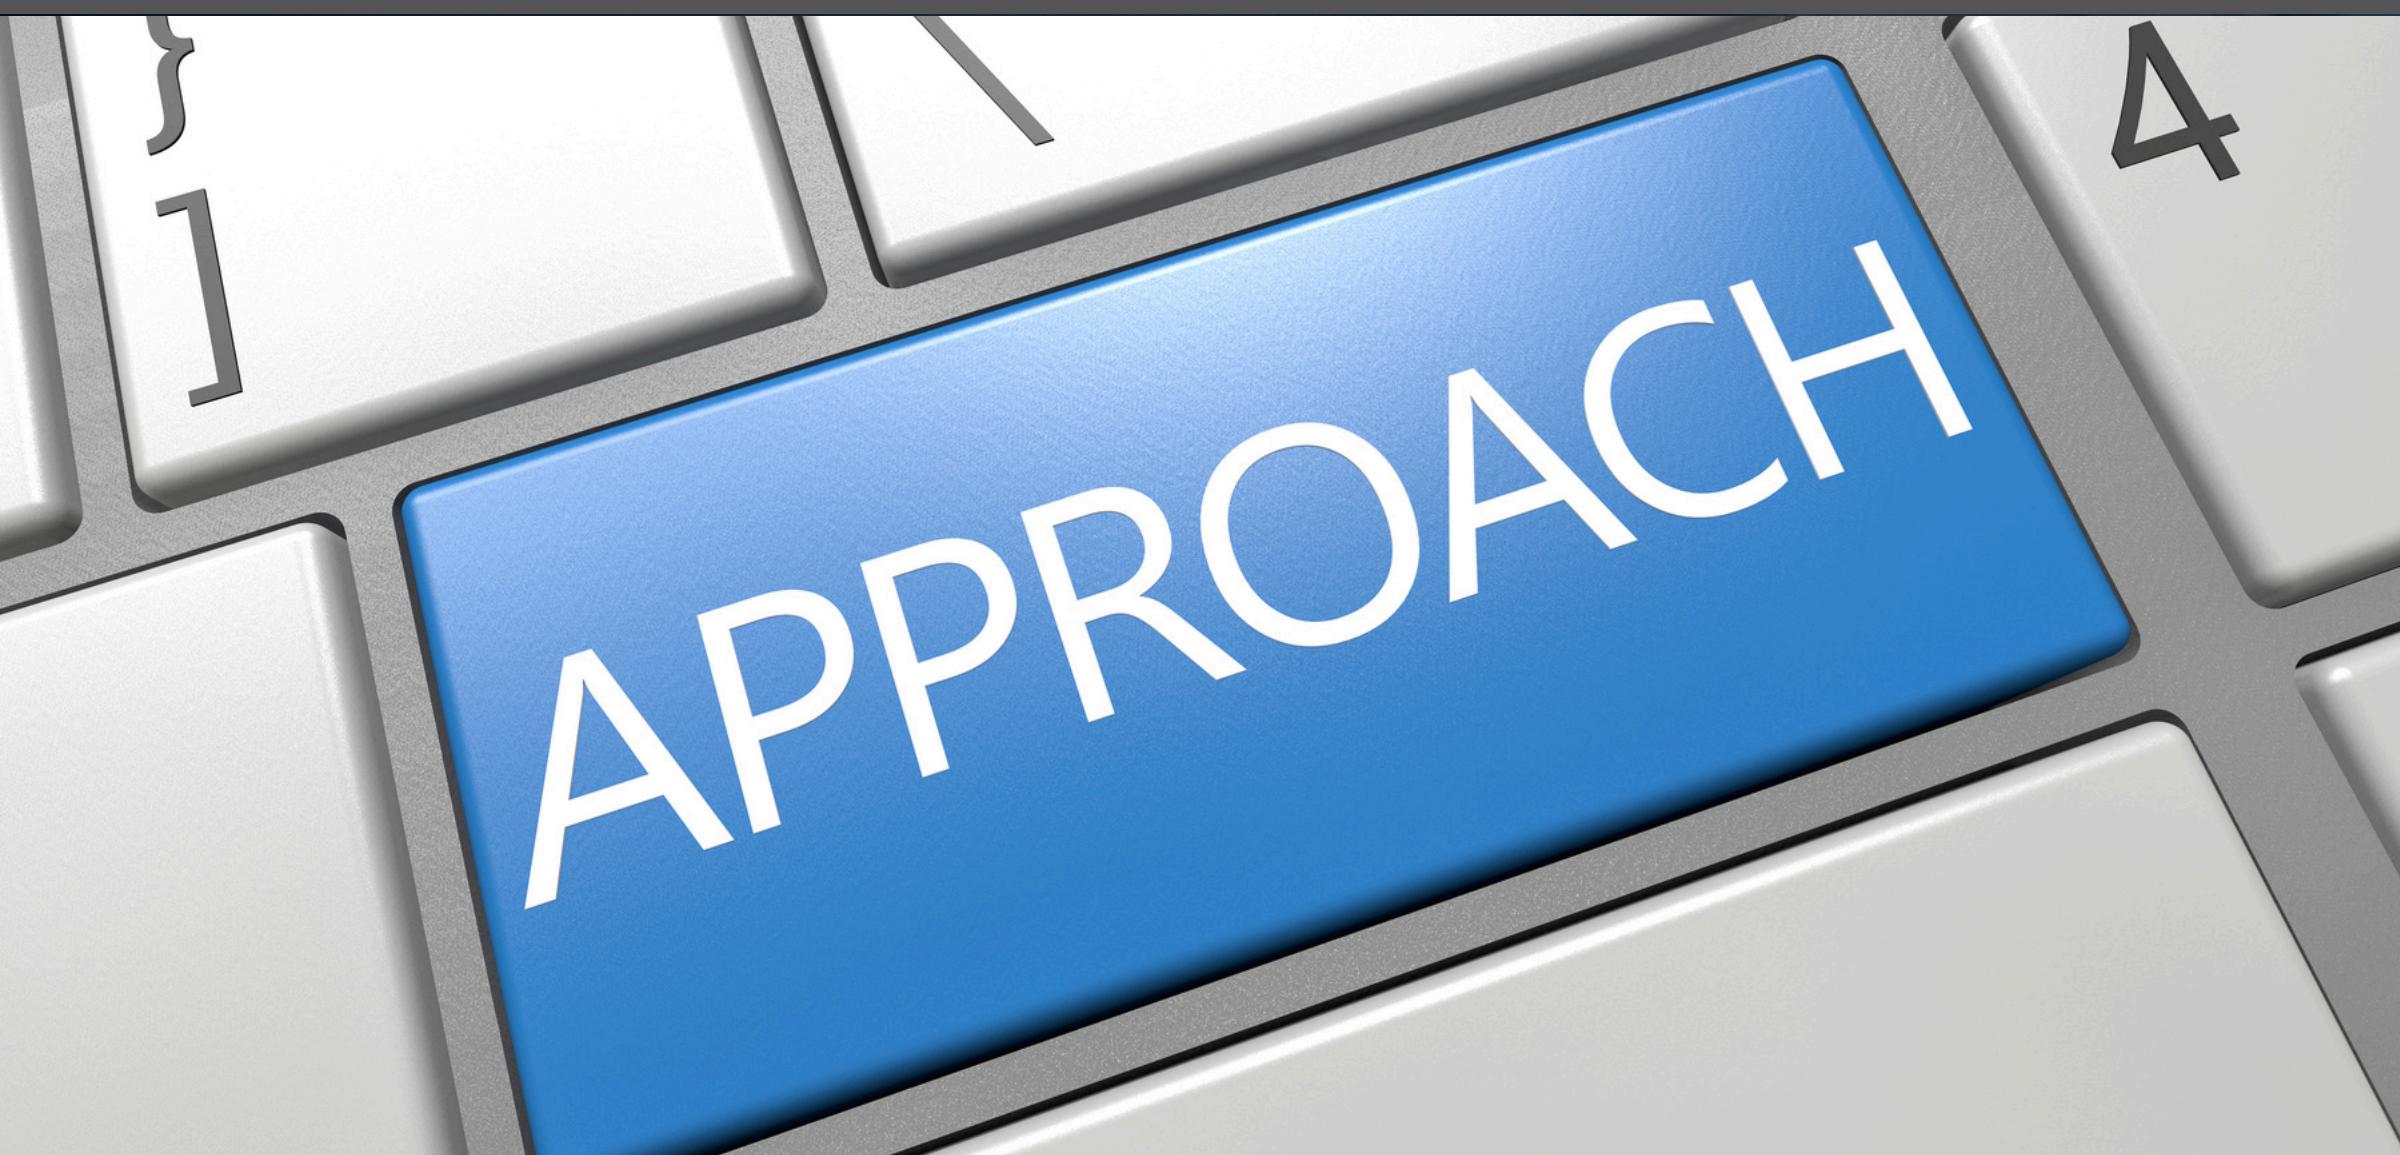

The Lauterbach TRACE32 Debugger can be remotely controlled via CAPL, allowing automated test execution and efficient integration into existing testing workflows, for example in simulation or verification environments.

→

1. Analysis and Review of your existing test setup.

2. Developing the solution with the identified functions and API interfaces, and optimizing your test environment.

3. Handover: Delivery of a DLL that can be integrated into your CAPL environment.

BENEFITS

- **Efficient test automation**

- **Seamless integration in the test environment**

- **Experienced test engineers**
